What Affects a Child's Response to Nutropin Therapy?

The goal of Nutropin therapy for children with GHD is to increase the rate of growth and try to achieve adult height within the normal range before the growing ends of the bones fuse. But how does your healthcare provider set a target height for your child? And what can you do to help?

Assessing Progress for Adults with GHD

When taking Nutropin therapy, you may experience changes that are very gradual. Other changes may not be visible at all, but may occur silently within your body. So what does your healthcare provider look at when measuring your progress?

Indication Statements

Nutropin AQ[®] [somatotropin (rDNA origin) injection] and Nutropin[®] [somatotropin (rDNA origin) injection] are indicated for the long-term treatment of growth failure due to a lack of adequate endogenous GH secretion.

Nutropin AQ[®] [somatotropin (rDNA origin) injection] and Nutropin[®] [somatotropin (rDNA

Questions?

Call the Stepping Stones Nurse Hotline at 1-888-7 Nu-Step (888-768-7837).
